## Osteoporosis services

- ◆ Bone density study (DEXA)
- ◆ Vertebral assessment (IVA)

## About us

Bertrand Breast and Osteoporosis Center is Greensboro's first comprehensive center dedicated exclusively to breast and bone health. With our focus exclusively on women's imaging, we offer patients the latest advances in mammography and osteoporosis testing – and the proven benefit of years of experience.

## Trust the hands of experience.

Dr. Margaret L. Bertrand, who founded our center in 1983, has more than 30 years of experience in mammography. She is also a certified clinical densitometrist, trained to detect osteoporosis in its early stages. Our staff has a combined 95-plus years of experience in mammography and bone densitometry.

## Get a second look.

Bertrand Breast Center was one of the first mammography centers in the nation to add the R2 ImageChecker®, a computer-aided detection system that has been proven to find up to 19 percent more breast cancer than the physician's eye alone.

## Mammograms don't have to hurt.

Ask us about the Woman's Touch MammoPad®, a doctor-created cushion that makes mammograms more comfortable for many women.

## Have you had a bone density test?

One of every two women 50 and older will have an osteoporosis-related fracture in her lifetime. Bone density screening can detect this disease in its early stages, when it can be stopped and even reversed.

## Don't put it off!

We'll help you fit these important screenings into your busy life. In most cases, women having a screening mammogram or bone density test are in and out of our office in less than an hour.
